

INFLURIOS

COLLABORATION MONETIZATION & PROTECTED PAYMENTS

Product & Commercial Addendum

Addendum to Influrios Product Strategy v2.2 | Version 1.1

Decision summary: Influrios will support configurable collaboration fees and provider-managed protected milestone funding. Brands fund collaborations before work begins; creator payouts are released against agreed milestones, subject to review, dispute and jurisdiction rules. Actual fee percentages and thresholds are admin-configured and versioned, never hard-coded.

Prepared from the latest product decisions on collaboration monetization, milestone funding, disputes, cancellations and multi-country payment routing.

1. Purpose and Product Decision

This addendum extends the Influrios Product Strategy with a transaction layer for paid collaborations. The objective is to make collaboration safer for both creators and businesses while creating a new revenue stream for Influrios. The model combines configurable platform/managed-service fees with protected milestone-based funding through approved payment providers.

Product principle: creators should know that a funded collaboration has real money behind it before they begin work; brands should know that funds are not released merely because a creator was invited. Release follows the agreed commercial milestones and dispute rules.

2. Revenue Architecture

Influrios should support three complementary revenue layers. They are commercially related but must remain separately identified in product, reporting, contracts and accounting.

Revenue layer	What Influrios provides	Primary monetization
Subscription	Influencer Card tiers, discovery tools, analytics, collaboration access, business/agency capabilities	Recurring plan fees
Collaboration transaction	Marketplace matching, collaboration workflow, contract, protected funding, milestone administration	Platform/collaboration fee
Managed services	Active sourcing, outreach, campaign coordination, negotiated or concierge services where legally enabled	Managed introduction, campaign-management or success fee

3. Collaboration Service Levels

Service level	Influrios role	Illustrative charging model
Discovery only	A creator/business finds another party through search and connects independently.	Subscription and/or no transaction fee.
Platform match	Influrios recommends complementary creators/brands and facilitates the introduction.	Match/service fee where configured.
Contracted collaboration	The collaboration terms, funding, milestones and payouts are managed through Influrios.	Collaboration platform fee.
Managed introduction	Influrios staff actively sources or introduces a suitable counterparty.	Managed introduction / success fee where legally enabled.
Managed campaign	Influrios coordinates a larger part of campaign execution and deliverables.	Higher managed-service/campaign fee where legally enabled.

The service level must be recorded on each collaboration because the nature of Influrios' involvement affects pricing, legal treatment, reporting and jurisdiction availability.

4. Collaboration Fee & Commission Matrix

The applicable fee must be determined from an admin-managed matrix rather than a single global percentage. The live rule should evaluate the commercial context and return a disclosed charge before either party accepts the collaboration.

Matrix dimension	Examples
Jurisdiction	Country, state/province/region, currency
Service level	Discovery, platform match, contracted collaboration, managed introduction, managed campaign
Collaboration type	Sponsored content, event, review, creator-to-creator, ambassador, product launch
Creator plan	Starter, Plus, Pro, agency-managed creator
Business plan	Free/standard, Business Pro, Agency, Enterprise
Relationship source	AI match, business search, creator search, admin introduction, campaign invite, pre-existing relationship
Value band	\$0-\$1K, \$1K-\$5K, \$5K-\$25K, custom bands
Fee method	Percentage, flat fee, percentage + flat, tiered, minimum, maximum, waived
Payer	Creator, business, split, custom allocation
Promotion	Temporary campaign, negotiated enterprise rule, launch waiver

5. Fee Types Must Remain Distinct

Influrios should not describe every charge as a commission. The product and legal documents should distinguish the economic purpose of each fee.

Fee type	Purpose
Platform Service Fee	Use of marketplace/transaction infrastructure.
Collaboration Fee	Fee attributable to a paid collaboration completed through Influrios.
Managed Introduction Fee	Fee for an active, approved sourcing/introduction service.
Managed Campaign Fee	Fee for campaign coordination or managed execution.
Success Fee	Outcome-dependent fee where legally approved.
Payment Processing Fee	Processor or marketplace payment cost, if passed through.
FX Fee	Currency-conversion cost where applicable.
Cancellation / Dispute Fee	Only if clearly disclosed and legally permitted.
Referral Fee	Commission owed under an approved referral program.

6. Protected Collaboration Payment Model

For paid collaborations, the recommended default is a provider-managed protected payment flow. The brand funds the collaboration before the creator begins material work. Funds remain under the approved payment provider's control and are released according to agreed milestones. Influrios should use "Protected Collaboration Payment" or similar wording unless an approved provider/legal structure permits the word "escrow."

Preferred customer promise: "Funded before work begins. Released as agreed milestones are completed."

7. Funding Modes

Funding mode	When to use	Behavior
Full prefunding	Default for most standard campaigns	Brand funds 100% of collaboration value before creator starts. Future milestones are already financially covered.
Staged prefunding	Large or long-running campaigns	Phase 1 funds must be secured before work starts; later phases must be funded before their work begins.
Recurring funding	Ambassador / monthly engagements	Each cycle has a required funding date and milestone schedule.
No protected payment	Jurisdictions/providers where the protected flow is unavailable	The system must clearly mark the collaboration as outside Influrios protected-payment coverage.

8. Milestone Model

Every funded collaboration should contain one or more milestones with an amount, deliverable, due date, review window and release condition. Templates can be provided, but parties should see and approve the final schedule before funding.

Example milestone	Illustrative amount	Release condition
Campaign acceptance / kickoff	10%	Creator accepts final brief and collaboration becomes active.
Draft content	30%	Draft submitted and approved or auto-approved after review window.
Final content	30%	Final asset approved within agreed scope/revision limits.
Publication	20%	Required content goes live and publication evidence is recorded.
Reporting / completion	10%	Required reporting or final post-campaign obligations are complete.

Percentages above are examples only. Milestone amounts and structures must be configurable and captured in the collaboration snapshot.

9. Review, Revisions and Auto-Approval

- Each milestone has a defined review window set by template/rule and shown before acceptance.
- The brand may approve, request an allowed revision, or open a documented dispute.
- Revision rounds are limited by the collaboration agreement. Additional work requires a change order or creator consent.
- If the review window expires without approval, permitted revision request or dispute, the milestone may auto-approve where the configured rule allows it.
- Auto-approval periods must be configurable by country, collaboration type, service level and contract template.

10. Payout and Fee Transparency

Before the parties accept a collaboration, Influrios must show the economics clearly. The applicable fee is frozen into that deal at acceptance.

Creator view	Business view
Gross milestone/campaign amount	Campaign compensation
Influrios fee deducted, if creator-paid	Influrios fee charged, if business-paid
Processor/FX/tax deductions where applicable	Processor/FX/tax charges where applicable
Estimated net payout	Total amount to fund/pay

Rule changes are prospective. If Admin changes a commission rule tomorrow, an already accepted collaboration keeps the exact fee snapshot that was accepted by the parties.

11. Cancellations, Refunds and Kill Fees

Cancellation behavior must be tied to the signed collaboration terms. Completed/approved milestones should generally remain payable. Undelivered future milestones can be returned according to the agreement. A current milestone may have a partial-payment or kill-fee rule if work has already begun.

Scenario	Product behavior
Brand cancels before creator begins	Refund according to contract; any disclosed non-refundable fee handled by configured rule.
Brand cancels after accepted work begins	Completed milestones remain payable; current milestone uses kill-fee/partial rule; future funds are returned.
Creator cancels without permitted cause	Unreleased milestone funds may return to brand; completed approved work remains governed by contract.
Partial delivery accepted	Release only the agreed accepted amount; remaining balance follows amendment/refund rule.
Chargeback / payment reversal	Collaboration moves into payment-risk workflow; ledger and payout consequences are recorded.

12. Dispute Resolution Workflow

Disputes should be milestone-specific. The disputed amount is paused while unaffected approved milestones should continue normally unless a broader legal/payment hold is required.

- Party opens dispute against a specific milestone and chooses a reason code.
- Both sides can submit the collaboration brief, files, links, revision history, correspondence and other evidence.
- Influrios moderation/operations can request additional evidence and record a decision.
- Possible outcomes: release to creator, refund to brand, split decision, mutual settlement, or provider/legal escalation.
- Every decision and fund movement is written to the audit/financial ledger.

13. Content Rights and Payment

Milestone acceptance and intellectual-property rights should be separate concepts. The collaboration agreement should define when the brand's content license activates. A preferred default is that specified usage rights activate when the corresponding payment is released, unless the parties expressly agree otherwise.

14. Repeat Relationships and Attribution

Influrios should protect genuine platform-originated introductions without claiming a creator's business relationship forever. The commercial engine therefore needs relationship attribution.

Relationship source	Possible treatment
Pre-existing relationship	Creator/business can declare and, if necessary, substantiate it; introduction fee may not apply.
Organic marketplace discovery	Standard platform transaction rule.
AI/platform match	Configured platform match/collaboration rule.
Admin managed introduction	Managed introduction rule, subject to jurisdiction and agreement.
Repeat collaboration	Repeat-fee rule may apply only within a disclosed attribution period.
Long-term ambassador relationship	Specific renewal/attribution rule in the signed agreement.

Any anti-circumvention period must be disclosed, reasonable, versioned and jurisdiction-configurable.

15. Jurisdiction and Payment Provider Gating

Protected payments and managed-service commissions must be switchable by jurisdiction. Software capability alone does not authorize a financial or managed-representation activity. Admin country/state configuration should determine whether each service is enabled and which provider may be used.

Capability	Example jurisdiction status
Self-service discovery	Enabled
Platform contracted collaboration	Enabled
Protected milestone funding	Enabled only with approved provider

Capability	Example jurisdiction status
Managed introduction	Enabled / disabled based on legal review
Managed negotiation	Separate legal/licensing approval
Creator payout	Provider and KYC requirements configured
Business funding methods	Provider/currency/method matrix

16. Product UX Requirements

- Funding badge: Fully Funded, Partially Funded, Awaiting Funding, Protected Payment Unavailable.
- Milestone timeline with amount, due date, submission status, review deadline and payout status.
- Fee preview before acceptance and immutable fee summary after acceptance.
- Creator payout summary and business funding summary shown separately.
- Revision counter and change-order action.
- Open Dispute action attached to eligible milestones with visible evidence trail.
- Admin transaction view with collaboration, milestones, provider, fee rule, funds status and audit history.

17. Legal Document Impact

The legal pack should be updated so the product behavior and contracts match. The percentage itself should normally be supplied by the live collaboration fee snapshot rather than hard-coded into static legal text.

Document	Required addition
Terms of Service	Right to charge disclosed platform/collaboration/managed-service fees and use approved payment providers.
Creator Terms	Fee deductions, payout conditions, milestone release, disputes, cancellations and taxes.
Business Terms	Funding obligations, payment methods, review windows, approvals, disputes and refunds.
Collaboration Marketplace Terms	Fee determination, service levels, relationship attribution and protected-payment rules.
Creator-Brand Agreement	Exact collaboration value, milestones, fee snapshot, review/revision rules, rights and cancellation.
Creator-Creator Agreement	Monetary/non-monetary collaboration treatment and any revenue split.
Managed Promotion / Campaign Agreements	Managed fee, authority, attribution period and jurisdiction limitations.
Payment & Payout Policy	Provider role, payout timing, refunds, reversals, chargebacks, FX, taxes and verification/KYC.
Subscription Terms	Any subscription-specific collaboration fee benefit.

18. Recommended MVP Scope

1. Build the collaboration fee engine with admin-configured rule matrix and immutable snapshots.
2. Support one approved marketplace payment provider in the launch jurisdiction and full prefunding for standard paid collaborations.
3. Support milestone templates, submission, approval, limited revisions, auto-approval, payout release and partial refund.
4. Support dispute creation, evidence collection and admin decisioning for a milestone.
5. Add jurisdiction activation controls before adding more providers or managed-service modes.
6. Add staged funding, recurring ambassador payments, advanced change orders and revenue-sharing collaborations after the base ledger is stable.

19. Success Metrics

Metric	Why it matters
Funded collaboration GMV	Shows marketplace transaction volume.
Fee revenue by service level	Measures monetization beyond subscriptions.
Funding-to-completion rate	Measures whether funded deals complete successfully.
Milestone approval time	Shows friction in collaboration execution.
Dispute rate / resolution time	Tracks trust and operational quality.
Creator payout time	Core creator trust metric.
Repeat collaboration rate	Signals durable business relationships.
Off-platform leakage / pre-existing claims	Helps tune attribution and fee policy fairly.

20. Product Decisions Locked by This Addendum

- Influrios will support collaboration transaction monetization in addition to subscriptions and managed services.
- Fee percentages/amounts are not fixed in this document; they are versioned admin configuration.
- Paid collaborations should default to protected milestone funding where an approved provider/jurisdiction supports it.
- Influrios should not call the product “escrow” unless the approved legal/provider structure permits that representation.
- Existing accepted deals retain their frozen fee and milestone snapshots when future admin rules change.
- Disputes are milestone-specific wherever practical, and undisputed approved amounts should not be unnecessarily frozen.
- Jurisdiction gating is mandatory for protected payments and managed-service modes.

21. Core Influrios Differentiation & Homepage Value Proposition

Influrios should present itself as more than an influencer directory. The product combines creator identity, specialty-based discovery, collaboration infrastructure and protected transaction workflows in one ecosystem. The homepage must communicate these differentiators before relying on scale statistics.

Public positioning: “Influrios — Influence. Identity. Opportunity.” Supporting proposition: “Discover the right influence. Build your creator identity. Collaborate with confidence.”

21.1 Four Core Public-Facing Pillars

Pillar	Customer Promise	Primary Audience	Commercial Role
Influrios Card	One professional identity for social presence, specialty, contact details and opportunities.	Creators / influencers	Standalone acquisition product; Starter/Plus/Pro monetization.
Influence Intelligence	Discover creators by what they truly influence, not just follower count.	Brands, agencies, creators	Discovery subscriptions, advanced filters, intelligence and search.
Collaboration Network	Connect creators, complementary specialists and businesses around real opportunities.	Creators + businesses	Matching, collaboration fees, managed introductions and relationship growth.
Protected Payments	Fund collaborations and release payments according to agreed deliverables and milestones in supported markets.	Creators + brands	Transaction fees, trust, payment orchestration and dispute workflows.

21.2 Secondary Unique Selling Points

- End-to-end creator commerce: discovery, evaluation, invitation, contracting, milestones, funding, delivery and payout can live in one connected workflow.
- Specialty intelligence: creator relevance is organized around actual areas of influence, content concentration, geography, platform strength and commercial fit rather than broad categories alone.
- Creator-to-creator collaboration: the “I Offer / I Need” model enables complementary matches such as interior designer + woodworking creator or hairstylist + hair supplier.
- Claimable AI-assisted profiles: Influrios can prepare preliminary profiles from permitted public/licensed information, then invite creators to claim, verify and correct them.
- Managed business development: eligible creators can opt into promotion, introductions and relationship facilitation with relevant business categories.
- Global-by-design platform architecture: country-specific payments, currencies, providers, feature activation and policy controls can be configured without rewriting the core product.
- Trust architecture: meaningful verification states, transparent sponsored-content requirements, creator/business protections and auditable transaction records are product features, not only legal boilerplate.
- Flexible monetization: subscriptions, Influencer Card tiers, collaboration fees, managed services, advertising/sponsored placement and enterprise/API access can coexist without hard-coded commercial rules.

21.3 Homepage Decision: Replace Placeholder Statistics with Value

The current homepage statistics strip (for example, “50K+ Influencers,” “12K+ Active Collaborations” or similar design placeholders) should be replaced during launch with a value-proposition strip. Influrios should not publish scale statistics until the figures are real, auditable and approved for public use. Real social-proof metrics can later return as a separate section.

Launch rule: communicate differentiated value first. Publish scale statistics only when the underlying metrics are real and defensible.

21.4 Recommended Homepage Strip Copy

Element	Default Copy	Purpose
Section eyebrow	WHY INFLURIOS	Signals that this section explains differentiation.
Headline	One platform. Four powerful ways to turn influence into opportunity.	Unifies the four pillars into one ecosystem story.
Subtitle	Build your identity. Get discovered. Collaborate with the right people. Get paid with confidence.	Maps the creator/business journey into plain language.
Influrios Card	One professional identity for your socials, specialty, contact details and opportunities.	Identity + acquisition wedge.
Influence Intelligence	Discover creators by what they truly influence — not just follower count.	Search/differentiation.
Collaboration Network	Connect creators, complementary specialists and businesses around real opportunities.	Network effect and matching.
Protected Payments	Fund collaborations securely and release payments as agreed milestones are completed.	Trust and commercial execution.
Closing statement	More than a directory. An ecosystem for influence.	Positions the full platform.

21.5 Homepage Placement and Storytelling

- Keep the strip in the existing statistics location unless UX testing identifies a better placement.
- The strip should appear after visitors have seen creators/opportunities, but before the collaboration and Influrios Card sections expand on those features.
- Do not duplicate long feature descriptions in the strip. It is a concise explanation layer that links deeper into the relevant product page or section.
- The four pillar names should remain consistent across homepage, product pages, onboarding, deck and sales collateral unless a deliberate brand decision changes them.
- Protected Payments copy must remain aligned with jurisdiction/provider availability and must not use the term “escrow” unless approved for that market.

21.6 Design Reference

The following visual is the preferred reference for the replacement strip. It is a design reference, not a raster component: production must render text, icons, links and accessibility semantics as live UI components.

22. Additional Product Decisions Locked by v1.1

- The four core public-facing differentiators are Influrios Card, Influence Intelligence, Collaboration Network and Protected Payments.
- The homepage statistics strip is replaced at launch by the Value Proposition Strip; real statistics become a separate, later social-proof component.
- The value strip should be admin-manageable, but the four-pillar default is the approved launch content.
- The design must remain consistent with the Influrios blue-purple visual system while allowing each pillar a subtle functional accent.
- Feature claims shown publicly must reflect actual market/provider availability and legal activation status.
