

INFLURIOS

Influencer Terminology & Identity System

Development Change Addendum v1.0

Global product-language migration: Creator → Influencer

Applies to public UI, onboarding, Collaboration, business discovery, mentorship, account roles and development vocabulary.

Change Directive

Influrios must stop using “Creator” as the default public identity for its influencer-side user class. The canonical public term becomes “Influencer.” “Content Creator” remains a valid self-description, specialty or professional designation inside an Influencer profile. Influrios is not positioned as another social network where users create content; it is the professional identity, discovery, collaboration and commerce layer around influence that already exists across social platforms.

1. Product Language Decision

The platform currently overuses “Creator,” which can create two forms of confusion: many influencers identify primarily as influencers rather than generic creators, and “Create a Creator Account” can sound like joining another content-posting social network. The product vocabulary must instead reinforce that Influrios organizes and commercializes an influencer’s existing social presence.

1.1 Canonical identity hierarchy

Layer	Canonical term	Meaning
Platform role	Influencer	Primary public user role for people whose influence or content presence is represented on Influrios.
Self-description	Content Creator / Blogger / Podcaster / Photographer / Athlete / Expert / Public Figure / etc.	How the influencer describes the nature of their influence or profession.
Professional profile	Influencer Profile	The cross-platform professional identity hosted by Influrios.
Commercial activity	Influencer Collaboration	Paid or non-paid collaboration involving an influencer.
Creative tools	Creator tools / Content tools	Permitted only when referring specifically to content-production features, not the account class.

1.2 Updated platform definition

Canonical product definition

Influrios is a Global Influencer Identity, Discovery, Collaboration and Commerce Platform.

Recommended public explanation: “Your social platforms are where you create influence. Influrios is where that influence becomes discoverable, collaborative and commercially useful.”

1.3 Do not imply another social network

- Prefer “Join Influrios as an Influencer,” “Create Your Influrios Profile,” or “Claim Your Influrios Profile.”
- Avoid “Create a Creator Account,” “Start Creating on Influrios,” or other language implying Influrios is a new publishing destination.
- Content creation may be supported as a collaboration deliverable or portfolio function, but content distribution remains primarily on external social platforms.

2. Global Terminology Replacement Matrix

Current	Replace with	Notes
Creator	Influencer	Default public role label.
Creator Account	Influencer Profile / Influencer Account	Use “Profile” in acquisition-facing UI where possible.
Create Creator Account	Join Influrios as an Influencer	Avoid social-network framing.
Creator Profile	Influencer Profile	Global replacement.
Creator Discovery	Influencer Discovery	Business/search language.
Find Creators	Find Influencers	Global replacement.
Featured Creators	Featured Influencers	Global replacement.
Creator Collaboration	Influencer Collaboration	Use for collaboration taxonomy.
Creator-to-Creator	Influencer-to-Influencer	Internal enum may use INFLUENCER_INFLUENCER.
Creator Opportunities	Influencer Opportunities	Includes business and influencer opportunities.
Creator Collaboration Opportunities	Influencer Collaboration Opportunities	Public Collaboration page and dashboard.
Creator Earnings	Influencer Earnings	Financial UI.
Creator Payout	Influencer Payout	Financial UI.
Creator Connected Account	Influencer Financial Account	Internal/technical wording.
Creator Mentor	Influencer Mentor	Mentorship system.
Creator Community	Influencer Community	Where platform-wide community wording is used.

Do not perform blind string replacement where “creator” is semantically correct in a content-production context. Examples: “content creator,” “creator tools,” “creator media asset,” or third-party API terminology may remain where they refer to creative activity rather than the Influrios account role.

2.1 Profile self-identification options

Influencer onboarding should allow users to select how they describe themselves while preserving Influencer as the platform role. Admin manages the list.

- Influencer
- Content Creator
- Influencer & Content Creator
- Blogger
- Podcaster
- Photographer
- Videographer
- Reviewer
- Public Figure
- Industry Expert
- Athlete
- Musician / Artist
- Other

3. UX & Onboarding Changes

3.1 Public acquisition

Area	Required wording direction
Primary CTA	Join as an Influencer
Profile creation	Create Your Influrios Profile
Existing public profile	Claim Your Influrios Profile
Discovery promise	Get discovered by businesses and other influencers by what you actually influence.
Cross-platform identity	Bring your social presence together without rebuilding your audience on another platform.
Collaboration	Find businesses and influencers that fit your specialty, audience and goals.

3.2 Business-facing copy

- Find Influencers
- Get Influencer Suggestions
- Post an Influencer Request
- Invite Influencer
- Influencer Matches
- Influencer Collaboration
- Recommended Influencers for Your Business

3.3 Collaboration area

- Business Requests: “Businesses looking for influencers.”
- Influencer Collaboration Opportunities: “Influencers looking for other influencers, businesses or complementary professionals.”
- Influencer-to-Influencer and Influencer-to-Business become the canonical public collaboration types.
- Existing category pairings remain, but labels should use “Influencer” where the role is actually an influencer, e.g. Travel Influencer + Tourism Brand.

3.4 Mentorship

- Rename public concept to Influencer Mentorship.
- Use Emerging Influencers and Experienced Influencers as acquisition language.
- Public CTA: Become an Influrios Influencer Mentor.
- Mentee search: Find an Influencer Mentor.

4. Engineering & Data Migration

Because this change touches product identity, development should normalize the terminology rather than keep “creator” as the dominant canonical model indefinitely. However, migration must avoid breaking existing APIs, database relations, analytics, URLs or external integrations.

4.1 Preferred canonical entities

For new work, prefer:

- influencer_profile
- influencer_specialty
- influencer_platform_account
- influencer_match
- influencer_payout_profile
- influencer_collaboration / collaboration_party(role=INFLUENCER)
- influencer_mentor_profile

4.2 Backward compatibility

- Inventory every database table, API field, enum, route, component, analytics event, notification template and localization key containing creator/creator_id.
- Do not perform destructive renames in one deployment if existing clients depend on those names.
- Where needed, introduce influencer_* as canonical fields while temporarily supporting deprecated creator_* aliases.
- Add deprecation telemetry before removing old API names.
- Preserve historical analytics attribution by mapping legacy creator events to new influencer event taxonomy.
- External provider terms may retain their provider-defined naming internally where necessary; map them at the adapter boundary.

4.3 Internal enum guidance

Old example	New canonical example
CREATOR_BUSINESS	INFLUENCER_BUSINESS
CREATOR_CREATOR	INFLUENCER_INFLUENCER
MULTI_CREATOR	MULTI_INFLUENCER
CREATOR_PAYOUT_READY	INFLUENCER_PAYOUT_READY
CREATOR_MENTOR	INFLUENCER_MENTOR

5. Search, SEO, Analytics & Admin

5.1 Search and SEO

- Public page titles, metadata and headings should prioritize “influencer” while retaining content-creator synonyms in search metadata where useful.
- Search should treat “creator,” “content creator,” and “influencer” as related query concepts so users still find the same profiles.
- Profile specialty taxonomy must not collapse “Content Creator” into the platform role; it remains a selectable designation/specialty.

5.2 Analytics migration

- Rename new events such as `influencer_profile_viewed`, `influencer_invited`, `influencer_match_saved` and `influencer_payout_requested`.
- Analytics dashboards should display Influencer terminology even if legacy warehouse columns remain temporarily unchanged.
- Do not reset longitudinal metrics during migration; maintain mapping tables/semantic views.

5.3 Admin

- Admin user types should display Influencer, Business, Agency/Talent Manager, and other explicit roles.
- Admin can manage influencer self-description labels separately from the Influencer role itself.
- CMS/legal/document templates using old public wording must be flagged for migration.

6. Acceptance Criteria

- No public signup path asks a user to “Create a Creator Account.”
- Primary acquisition CTAs use Join as an Influencer, Create Your Influrios Profile, or Claim Your Influrios Profile.
- Business discovery uses Find Influencers / Influencer Suggestions terminology.
- Collaboration public and signed-in pages use Influencer Opportunities and Influencer Collaboration wording.
- Mentorship uses Influencer Mentor / Emerging Influencer terminology.
- Content Creator remains available as a self-description and searchable profile attribute.
- Legacy creator_* technical fields are either migrated or explicitly marked deprecated with compatibility mapping.
- No external integration is broken by the terminology migration.
- Searching “creator,” “content creator,” or “influencer” returns semantically appropriate Influencer profiles.
- All notification, email, legal, CMS and analytics display copy follows the new terminology unless “creator” is intentionally referring to creative activity.

Dev AI final instruction

Treat this as a platform-wide semantic migration, not a cosmetic label change. “Influencer” is the canonical public role. “Content Creator” and related professional labels describe the influencer; they do not replace the platform role. Update new development immediately and migrate existing surfaces in controlled phases with backward compatibility where required.
